DBOS Document Ingestion Pipeline

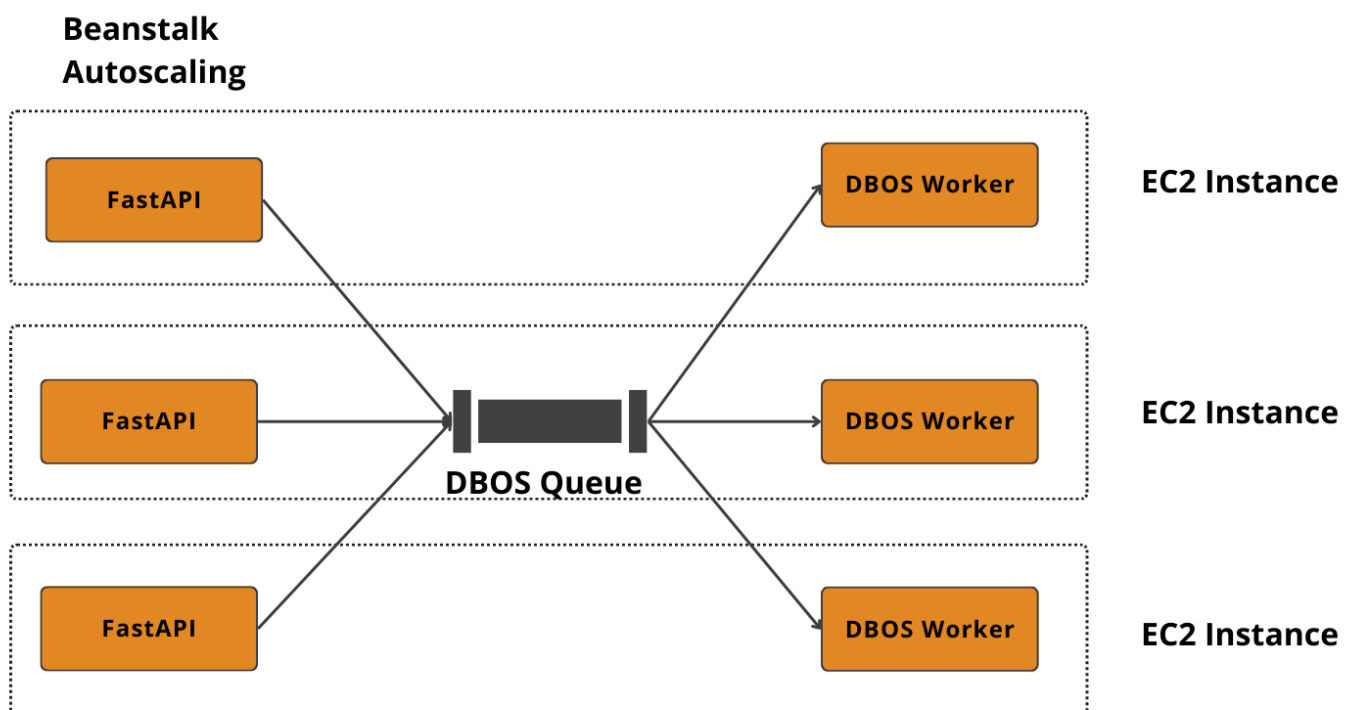

A highly scalable, durable, and reliable multi-document ingestion and Retrieval-Augmented Generation (RAG) system built with **DBOS**, **LlamaIndex**, and **FastAPI**.

Sever Client Endpoint

Run the server.py to start the api endpoint

```
uvicorn ingestion.server:app --reload
```

Workers which run on different ids and ingest the docs into the vectorDB

Run the worker.py

```
uv run worker.py
```
